Play media when paused or pause media when playing.
- 16 Forward**
 - Skip to the next song or chapter.
 - Seek forward in media.

¹ Button functionality depends on controlled device capability, features and configuration.

Getting started

Just power on the device and follow the instructions on the screen.

You can complete the setup without downloading any apps or registering an account.

- 1 Press the power button for 4 seconds.

- 2 Follow the on-screen instructions.

User interface

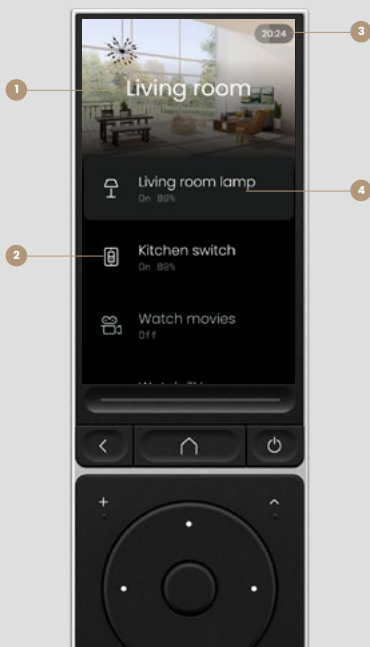

Add pages for each room in your home, or create pages for device categories. You are not locked into either option and free to organise the user interface the way you want.

- 1 **Pages**
Tap for quick access to all of your pages.

- 2 **Quick toggle**
Tap the device's icon to toggle its state.

- 3 **Settings**
Pull down from the top to access settings.

- 4 **Devices**
Add devices or groups to pages to organise your system the way you want.

Dynamic and adaptive

Pages dynamically adapt when an activity is running. Media information and the activity name will be shown on the top of the page, so you'll know with just a glance what activities are running.

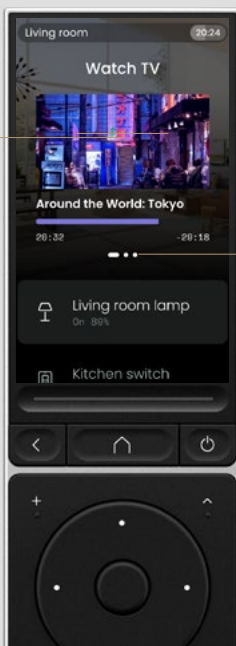

Buttons, like volume and transport controls, adapt to the activity as well, so you can quickly adjust the volume while navigating on a page.

Media information

- 1 Artwork, title and progress will be shown at the top of the page with interactive controls.

Multiple activities

- 2 Switch between all running activities with just a swipe.

Activities

Combine the controls of several devices on a single screen. Add widgets to the activity, that can display media artwork, information or execute commands and show sensor data.

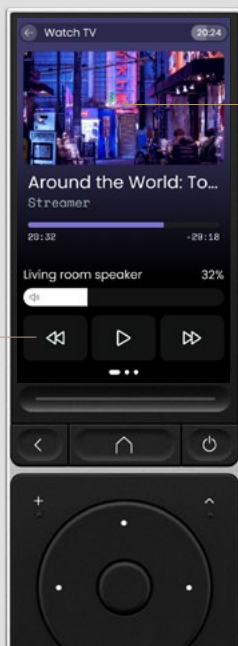

As easy as drag and drop, you can customise the user interface for all of your activities.

Media widget

- 1 Display artwork, title and more with the media widget.

Custom buttons

- 2 Execute a command from the screen? No problem. Just add a button widget.

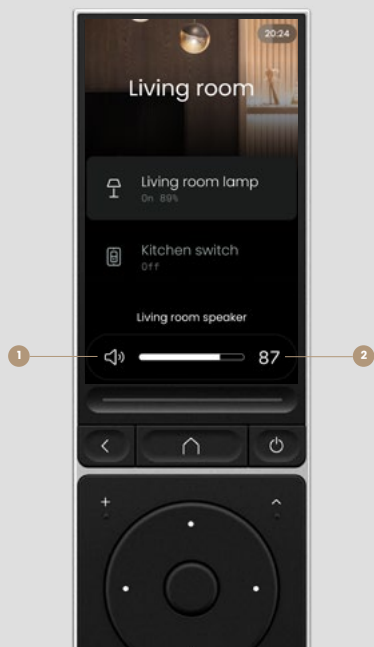

Touch slider

Want more precision and quicker control than pressing a button?

With the touch slider you can easily adjust the volume, seek media or switch between pages.

1 Visual feedback pops up as soon as you start sliding your finger.

2 The touch slider will control the running activity or one of the selected devices' features.

Every system and home is unique.

There's no universal configuration that fits all. Remote 3 offers plenty of customisation and flexibility to help you tailor it to your needs.
